(54) MOBILE DATA COMMUNICATION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a convenient and flexible mobile communication data system by combining the coordinate detecting means and the transmitting means transmitting coordinate data of a mobile terminal, the receiving means of a center device, and a reporting means reporting the received data to the user of the mobile terminal.

SOLUTION: The coordinate data detected by the coordinate detecting means of a mobile terminal 1 are transmitted to a center device 2. The coordinate data of the mobile terminal 1 are recorded in the center device 2. The coordinate data of the mobile terminal 1 and other data recorded in the center device 2 are transmitted, the transmitted data are received by the receiving means of the mobile terminal 1, and the contents of the received data are reported by the reporting means. The user of the mobile terminal 1 can know the positions of other users and can obtain various information from the center device 2.

LEGAL STATUS

[Date of request for examination] 28.07.2000

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
